

**Initiate an Engineering or R&D Project**

- Discuss your application or needs with REM
- Define an Initial Project Engagement
- Send your parts to REM

**Review Initial Project Results**

- Verify process deliverables
- Discuss additional needs
- Establish next steps and project scaling

**Review Initial Project Results**

- Send your pre-production or production parts to REM
- REM's expert technicians process your components
- Available as an ongoing production solution or a bridge to installation

**Install REM's Technology at Your Facility**

- Work with REM to specify the right equipment solution for your needs
- REM installs the equipment at your facility & provides the initial process setup & training
- REM provides ongoing supply of process consumables & tooling

**Processing of Your Components with REM's Technology**

- Steady state outsourced or installed processing of your components

**Support for Existing Production and/or the Expansion of your Isotropic Superfinishing**

- REM can provide equipment maintenance and process troubleshooting support
- REM can work with you to expand your use of REM's isotropic superfinishing technology via:
  - New part type qualification for outsourced or installed processing
  - New part integration into existing equipment
  - Acquisition of additional processing equipment
